

MUHAMMAD AALIYAN ARIF

Full Stack Developer | AI/ML Integration

aaliyanarif@gmail.com | +92-320-0487690 | [linkedin.com/in/aaliyan-arif-b17172276](https://www.linkedin.com/in/aaliyan-arif-b17172276) | my-resume-lovat-tau.vercel.app

PROFESSIONAL SUMMARY

Full stack developer who ships end-to-end features independently, from React frontends to Django REST APIs to graph-database backends. Combines hands-on product development experience with ML research exposure as a Teaching Assistant at UMT. Seeking a team where clean code and measurable impact matter.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES2022+)

Frontend: React, Next.js, Tailwind CSS, Responsive UI Design

Backend: Django, Django REST Framework, REST API Design

AI / ML: TensorFlow, Scikit-learn, YOLOv8, OpenCV

Data: Pandas, Matplotlib

Databases: Neo4j (Cypher), Relational SQL

EXPERIENCE

Junior Full Stack Developer — Big Binary Tech

Apr 2026 – May 2026

- Delivered three production-ready features across frontend and backend within a 6-week contract, meeting all sprint deadlines.
- Reduced bug-fix turnaround time by independently diagnosing and patching both client-side React components and Django API endpoints.
- Accelerated new-developer onboarding by documenting full-stack workflows, cutting setup time by an estimated 30%.

Frontend Development Intern — Code Alpha

Jul 2025 – Oct 2025

- Built and deployed four responsive web applications using React and Tailwind CSS, each passing client acceptance criteria on first review.
- Improved component reusability across projects by extracting 12+ shared UI components, reducing duplicate code by approximately 40%.
- Enhanced UX on two core product pages, cutting reported UI-related support tickets by 25% within one month of release.

Teaching Assistant, Machine Learning — UMT

Apr 2025 – Jul 2025

- Mentored 30+ students through model-training pipelines in Python (TensorFlow, Scikit-learn), helping the section achieve a 0.4 GPA-point average grade improvement.
- Resolved 90% of student debugging issues live during lab sessions, reducing after-hours help requests to near zero.

Teaching Assistant, Web Development — UMT

Nov 2024 – Feb 2025

- Designed and delivered 8 hands-on lab exercises covering HTML, CSS, and JavaScript, cited by students as the highest-value course materials in end-of-semester feedback.
- Supported 50+ students across weekly labs while maintaining a 4.7/5.0 student satisfaction score.

PROJECTS

Knowledge Graph Chatbot | Neo4j, Python, Cypher

2024

- Built a conversational AI chatbot backed by a Neo4j graph database, enabling multi-hop relationship queries not possible with flat SQL schemas.
- Designed Cypher query templates that cut average query execution time by 35% versus naive traversal approaches.

Real-Time Object Detection System | Python, YOLOv8, OpenCV

2024

- Implemented a YOLOv8 inference pipeline for live video streams, achieving under 80ms latency per frame on standard hardware, roughly 2x faster than baseline.
- Optimized the OpenCV preprocessing stage, reducing CPU overhead by 20% to sustain smooth 30 fps detection.

EDUCATION

BS, Artificial Intelligence — University of Management & Technology (UMT)

2021 – 2025

CGPA: 3.5 / 4.0 | Specialization in ML & Intelligent Systems
